Replayne Reveals ProjectISO's Official Title and Steam Store Page

Toronto, Canada — Replayne revealed today that their 3D platforming video game project, code-named *ProjectISO*, has now been officially named *Dynacat* and has been confirmed for launch on Steam for both Windows and Linux. The [Steam store page](#) is already available and information about other platforms will be announced in the future.

Dynacat is a fast-paced 3D action platformer with an isometric perspective. The main objective is to speed through stages making use of platforms, springs and other elements to overcome obstacles. “We enjoy the excitement of a game where your skill is rewarded with non-stop motion and wanted to see more games like that.” said Alexander, *Replayne Inc.* developer, explaining the motivation behind the project.

“We enjoy the excitement of a game where your skill is rewarded with non-stop motion and wanted to see more games like that.”

Dynacat is set to release on Steam later this year and [the store page](#) is already available for users who may want to add the game to their wishlist. Information about other platforms will be announced in the future. On PC the game will be compatible with Windows 7 and up and the game has been confirmed to work on two popular Linux distributions, Ubuntu and Debian.

More information about the game is available at the [official Dynacat website](#).

About Replayne Inc.: [Replayne Inc.](#) is a small game development company founded in July 2021 and based in Toronto, Ontario. The company focuses on building fun, 3D video games that can run smoothly on medium performance hardware.
